Environmental Impact Statement

The *Environmental Impact Statement (EIS)* is an in-depth analysis and reporting on your overall environmental impact, and can be instrumental in achieving a variety of environmental accreditations.

DUMPSTERS

All environmental savings estimates are based on conversion from products of the same weight made entirely of virgin wood fiber and/or petroleum-based plastic resin. Landfill waste estimates of products containing recycled content account for materials removed from the waste stream before production. Water, GHG, and energy savings of products containing Tree-Free and plastic-free materials are calculated at the raw material level of production and are not a complete Life Cycle Assessment. Landfill waste diverted at the end user level is based on proper disposal of recyclable, compostable, and biodegradable products. We are continuously researching new methods for updating our Environmental Impact Calculator. Any discrepancies between this analysis and past or future analyses can be attributed to our use of the most recent data available to us at the time.

# OUR PROMISE

Sustainability & Wellness

## Protect Life.

Every tree we save, every microplastic removed from the ocean, and through every person who gains knowledge about sustainability our mission is accomplished.

ASTM International is an international standards organization that develops and publishes voluntary consensus technical standards for a wide range of materials, products, systems and services.

## BPI

The BPI certification program applies science-based testing to prove a material will compost in a municipal or commercial facility and leave no toxic or lingering plastic residues in the soil.

## FSC

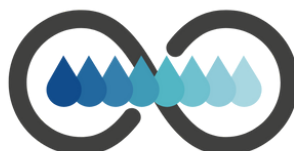

The Forest Stewardship Council (FSC) is an international non-profit, multi-stakeholder organization established in 1993 to promote responsible management of the world's forests. The FSC does this by setting standards on forest products, along with certifying and labeling them as eco-friendly.

## USDA BIO-PREFERRED

USDA's Bio-preferred® program serves to identify products that are eligible for preferred Federal purchasing and products whose bio-based content has been independently laboratory tested and 3rd party certified.
